SKILLS

- **Languages**: C++, Python, Java, HTML, CSS
- **Frameworks**: Streamlit, TensorFlow, Flask
- **Tools/Platforms**: Jupyter Notebook, Google Colab, VS Code, MySQL, Git, GitHub
- **Core Concepts**: Data Preprocessing, EDA, Machine Learning, Deep Learning, Model Evaluation, DevOps
- **Soft Skills**: Problem Solving, Teamwork, Adaptability

INTERNSHIP

BEIYO – Data Science Intern Jun 2025 – Sep 2025

- Identified high-potential PG outreach locations by integrating rental data from 99acres, NoBroker, and NestAway with AISHE/UGC, state IT portal, and Census of India datasets.
- Collected, cleaned, and preprocessed multi-source data using Python, performing **EDA** and **feature engineering** to develop Affordability and Demand scores combined into a Viability Index.
- Built an **XGBoost-based PG Occupancy Prediction Model** to evaluate location demand potential across target cities, delivering **87% prediction accuracy** in estimating expected PG occupancy trends.
- Delivered insights through geospatial heatmaps and an interactive Streamlit dashboard, enabling data-driven decisions for targeted PG expansion and outreach strategy.

Tech: Python, Pandas, NumPy, XGBoost, GeoPandas, Folium, Streamlit

PROJECTS

Customer Retention Intelligence & Revenue Risk Dashboard | Github Oct 2025 – Dec 2025

- Architected an end-to-end analytics platform using **Streamlit** and **Plotly**, visualizing real-time risk patterns across **10,000+ customer records** to drive data-informed retention strategies.
- Engineered a hybrid predictive model combining **XGBoost** and **Artificial Neural Networks**, attaining **0.88 ROC-AUC** and **86% accuracy** in identifying high-value customer attrition risks.
- **Designed** a dynamic **Financial ROI Engine** to calculate Customer Lifetime Value (CLV), enabling a strategic path to reduce revenue churn by **30%** through targeted interventions.

Tech: Streamlit, XGBoost, TensorFlow, Plotly

VisionGuard: AI-Powered Industrial Safety System | Github Jun 2025 – Jul 2025

- Designed and trained a 4-layer **Convolutional Neural Network (CNN)** in TensorFlow on a custom dataset of **2000+** images, using data augmentation to improve generalization.
- Engineered a real-time detection pipeline using **OpenCV** and **HSV Color Calibration**, achieving **85% accuracy** by precisely tracking hand contours in diverse lighting conditions.
- Implemented a virtual safety barrier using **Euclidean distance** logic, triggering real-time **Safe, Warning, and Danger** alerts with low-latency webcam processing.

Tech: TensorFlow, OpenCV, CNN, Euclidean Distance

Smart Traffic Signal Optimization System | Github Feb 2025 – Mar 2025

- Built an intelligent traffic controller using **Genetic Algorithms** and **Random Forest**, achieving **89% prediction accuracy** to preemptively adjust signal timings for incoming congestion.
- Simulated a realistic 24-hour traffic flow with **1,000+ vehicle records**, training the system to handle heavy rush-hour patterns effectively.
- Reduced average waiting times by **25%** compared to static signals by designing a priority engine that instantly reconfigures phases for emergency vehicles.

Tech: Genetic Algorithms, Random Forest, Flask

CERTIFICATES

- Master Generative AI - **Udemy** | Link
- AI Essentials – **Udemy** | Link
- Build AI Powered Apps – **Infosys Springboard** | Link

EDUCATION

- **Lovely Professional University** Phagwara, Punjab
  Bachelor of Technology in Computer Science and Engineering Aug 2023 – Aug 2027
- **Little Angels School** Uttar Pradesh, India
  Matriculation Apr 2020 – May 2021
- **Little Angels School** Uttar Pradesh, India
  Senior Secondary Apr 2022 – May 2023
